### Research Experience:

- Genome-wide association studies (Plink/seq, GCTA) and Next-Generation Sequencing (eg, bwa, samtools, GATK etc.);
- RNA-seq and Microarray;
- Post-transcriptional regulation by microRNAs;
- Epigenetics in complex diseases such as obesity, osteoporosis, schizophrenia and cancer;
- Pathway and network analysis of biological “omics” data, such as genomics, transcriptomics, proteomics, methylomics, etc;

- Develop and apply computational and statistical approaches to integrate and interpret large-scale biological “omics” data, with the goal of identifying disease mechanisms, biomarkers and treatment targets.
